## GLOSSARY OF TERMS

1. Civilian Labor Force - the number of persons 16 years and older, defined as employed or unemployed, excluding members of the armed forces.
2. Employed - those persons who work for pay or profit during a week or, as unpaid family workers, work 15 hours or more during a week. Also included as employed are those who, although not working had some job attachment and were not looking for work, including persons temporarily absent from a job due to illness, bad weather, vacation, or labor dispute, whether or not they were in a pay status during their time off.
3. Unemployed - the number of persons who, for an entire week, did not work at all, were able to work and available for work, and (1) were looking for work or (2) would have looked for work except that (a) they were waiting to return to a job from which they had been laid off, or (b) they were waiting to report to a new wage and salary job scheduled to start within the following 30 days (and were not in school during the week).
4. Unemployment Rate - the number of unemployed expressed as a percent of the civilian labor force.
5. Residence Data - a count of people by where people live.
6. Establishment Data - a count of jobs by where people work.
7. Seasonally Adjusted Labor Force Series - to facilitate the evaluation of the labor force, recurrent yearly movements have been isolated and removed by the Bureau of Labor Statistics X-11 variant of the Census Method II seasonal adjustment program.
8. Real Spendable Average Weekly Earnings of Private Nonagricultural Production Workers - represents the earnings of a hypothetical individual after deductions for State Income, Federal Income and Social Security taxes, and adjustment for change in purchasing power since 1967. This individual is assumed to be sole support for a family of four, earn the average weekly gross earnings of production workers in Montana's private nonagricultural industries, and take standard deductions on State and Federal income taxes. Taxes were computed using standard tax tables, and purchasing power was adjusted by deflating Spendable Earnings based on the national Consumer Price Index.
9. SMSA - Standard Metropolitan Statistical Area - as determined by the Office of Management and Budget. The SMSA must have a central city with a population of 50,000 or more.
10. LMA - Labor Market Area as determined by the Research and Analysis Bureau, Montana Department of Labor and Industry, consists of a central city or cities with a population of less than 50,000 and the economically integrated geographical area surrounding it.

All Labor Force statistics contained in this publication are in accordance with the Federal guidelines as established by the Bureau of Labor Statistics. Methodolgy procedures use a household sample conducted in Montana on a monthly basis which is called the Current Population Survey. These official statistics are used to allocate federal funding. Any questions concerning these figures should be directed to:

Bob Rafferty, Chief  
Research & Analysis Bureau  
MT. Department of Labor and Industry

Helena, Montana 59624

\*\*\* BENCHMARKING \*\*\*

This publication reflects the 1982 benchmarks for the Non-agricultural Wage and Salary Employment series and the Labor Force series. Annual tables reflecting this benchmark are included at the back of this publication.

What is benchmarking? A benchmark is a point of reference from which measurement can be made or upon which adjustments are based. The two series mentioned above will be addressed separately because of the differences in estimating each series.

Non-agricultural wage and salary employment is estimated from a carefully constructed sample survey of firms of varied size in each of the industrial classifications. As with any sample survey, unless all firms are sampled, there is bound to be some error. This limitation of any sample in representing the universe is the primary reason for benchmarking this series.

In periods of expansion employment levels tend to be underestimated and in periods of decline, these employment levels tend to be overestimated. The main reason for this over-and-under statement is due to new firm births and deaths respectively. Benchmarking will correct any errors in adjusting for new firms. Also, improvements in the quality of data and updating the industrial classifications of establishments are two more reasons this series is benchmarked each year. The benchmarking process for this series only examines the preceeding two years of data.

The Labor Force series is benchmarked for different reasons than mentioned above. Labor force data is derived from a monthly sample of households conducted by the Bureau of Census for the U.S. Department of Labor. This is the Current Population Survey (CPS) and is designed to be statistically significant on a monthly basis for the nation. However, several states, including Montana, do not have a large enough sample to insure reliability on a monthly basis but is reliable on an annual basis. This is the main reason for benchmarking the labor force series in Montana.

The labor force series also includes the benchmarked non-agricultural wage and salary employment by industry in its benchmarking process. Revisions to the labor force series is normally limited to the preceeding three years. Occasionally, an occurrence warrants the use of longer benchmarks. The 1980 Census was such an occurrence, and with the implementation of part of the data from the 1980 Census, benchmarking of the labor force series revised the previous six years.

The above discussion is a simplified version of the benchmarking process. If a more detailed explanation is needed, please feel free to contact this office.

## STATEWIDE

### Employment and Unemployment Situation (In Thousands)

MONTANA

	APR. 1983 <u>Forecast</u>	MAR. 1983 <u>Prelim</u>	FEB. 1983 <u>Revised</u>	MAR. 1982 <u>Revised</u>
Civilian Labor Force	392.4	387.6	384.4	380.4
Employment	357.4	349.3	343.7	343.5
Unemployment	34.9	38.3	40.7	36.9
Unemployment Rate	8.9%	9.9%	10.6%	9.7%

### Economic Highlights And Employment Outlook:

In the first quarter, mild weather and a mellowing recession contributed to keeping the number of unemployed lower than anticipated. The unemployed tally was feared to reach fifty thousand this winter, but the actual result was a count just over forty thousand. January's unemployed count was nearly seven thousand greater than one year ago, but the difference of only 1,400 was registered between March 1983 and March 1982.

A definite weakness remains in the state economy, especially in the manufacturing and mining sectors. The statewide unemployment rate for 1983 is foreseen to be slightly lower than the 8.6 percent in 1982. Coming out of a recession, many phases of the economy often improve before a healthy employment pattern is restored.

The construction industry should improve this spring and summer. Applications for building permits in the first quarter are at a pace unseen for a couple of years. Some cities have issued housing permits in the first quarter which surpass the total number for the entire year of 1982. The State Board of Housing is inducing loans with an interest rate just below 10 percent. About 1,500 homes will be financed with the \$75 million worth of bonds. A major construction project will be the replacement of a 200 mile natural gas line from Cut Bank to Anaconda. Starting in June and costing \$42 million, the work will be done in four phases and will be completed in 1986. Also extensive Air Force remodeling and expansion projects are planned for Great Falls and Havre.

Congressional action is staying within established tradition of allocating aid to help recover from a severe recession. Montana will receive about \$19.6 million in direct federal grants, and the funds will be targeted for counties with jobless rates that exceed the national average. Also, state and federal tax increases on fuel will

be used for highway maintenance and expansion, resulting in additional jobs.

"Call-back" is the sweet phrase that many laid-off lumber mill workers are receiving from employers. Nationally, many economists are upscaling their home building forecast as housing construction responds to lower interest rates. However, interest rates are still too unstable for a positive long term outlook in the lumber and woods industry.

Completion of oil and gas wells in the first quarter of 1983 dropped by 44 percent from the same period one year ago with 125 wells completed this year. Not all is lost as many of the drilling activities statistics may indicate. Overall, a healthier situation exists for the well established enterprises that can turn a profit at the present \$28-29 barrel price. Cost per foot for drilling declining 40 percent is an example of aid in getting a return on oil exploration and production. If the bottom line is looking at the number of good paying jobs the oil and gas industry has lost, this statistic will be a sad situation for a long time.

## GREAT FALLS SMSA

Construction of new homes in Great Falls has started after two years of stagnation. City permits issued for new homes have been on the increase, and other potential home builders are waiting for approval or they have plans on the drawing boards. New construction should mean jobs opening for skilled crafts and others in the building trades...expect employment to be gradual. Plans to construct a 54 unit luxury condominium is proposed to start this year. The units will be in three multi-story buildings constructed of concrete, masonry and steel. Several other businesses have been remodeling their stores for both cosmetic purposes and for expansion. Future plans also include the remodeling of a downtown area hotel plus adding another one and a half floors to the Great Falls landmark.

Pile driving began on the second phase of the Tenth Avenue South bridge under a contract that will put two ends on the span already in place. Construction cost will be \$1,764,053 and will employ 40 individuals during most of the construction time.

\$750,000 for improvements and \$1,320,000 for maintenance and repair at Malmstrom Air Force Base was appropriated by Congress. Additional funds have been made available under the Emergency Jobs Bill for the upgrading of three MAFB dormitories. The dormitory improvement project was approved last year but funds were not made available at that time.

\$1,796,000 has been budgeted for Great Falls by Montana's major utility company. Funds earmarked include \$668,000 for a machine shop; \$456,000 for rewinding the generator at Morony Dam; \$432,000 for replacing 200 feet of spillway at Rainbow and \$240,000 for a 69-KV Transmission line between Fairview and Bole.

Real estate sales continue to escalate in spite of the depressed economy...reason: interest rates have been declining. A new realty was launched this quarter employing five licensed and bonded sales associates.

A local oil company began installing two new anhydrous fertilizer plants in Great Falls and Fort Benton. The two existing dry fertilizer plants and two anhydrous ammonia plants will provide their products to users within a 100-mile radius.

A variety of new businesses were reported in the Great Falls area this quarter. One business is a commodities organization that will handle foreign currencies, metals, and financial instruments. The firm is geared toward improving marketing conditions for farmers and ranchers in the area. Another new firm will provide sales, service, maintenance and repair on area phone systems and telephones. The center will perform installations, including wiring, of homes and businesses. A new restaurant recently opened for business that will be serving many exotic Japanese dishes.

Two loads of Montana cattle of about 440 each was flown directly from Great Falls to South Korea. Three more loads are planned within the near future as part of another deal with the Koreans.

The only reported major business that succumbed to the woes of the economic conditions was a local lumber yard and home building business that has been established since 1967. They have liquidated all its material and fixtures. This was the second closing of a building supply industry this year.

## BILLINGS SMSA

Employment dropped to its seasonal low this quarter as the unemployment rate reached 9% in February. This unemployment rate is higher than it has been for many years. Because of the number of unemployed in the area, hundreds of people are applying for jobs that open up. More than 1400 applications were taken for four permanent positions that opened at a local refinery. Nearly 800 people stood in line to apply for summer work with the city when they began taking applications.

The future of food processing plants in the area remains uncertain. Refining of the 1982 sugar beet crop is completed and seasonal workers were laid off. The company continues negotiating with beet growers for the 1983 crop. A meat packing operation which reopened a plant that closed last year has laid off about 100 employees for an indefinite period. Another smaller meat processor began operating in March and currently employs ten people.

Mild weather allowed construction work to continue through the winter and declining interest rates are providing a good outlook in the building industry for the summer. January 1983 saw an increase of 240 percent over January 1982 in the number of building permits issued. Workers found 400 new construction jobs in March bringing employment in the industry to 2100--nearly 300 more than last year at this time. Many projects in the planning and proposing stages--from condominiums in subdivisions to skyscrapers downtown--give an optimistic outlook to the future for the construction industry.

The freight train serving Montana laid off 73 employees, who worked in the Laurel area during March. Less maintenance requirements and general economic conditions were the reasons for the layoffs. There are about 500 fewer railroad jobs in the area now than there were 3 years ago.

The hospital needs of the regional area served by Billings continues to grow. One hospital has submitted plans for a \$20 million expansion project that is to begin this summer. The high growth rate of medical and health care needs will continue for many years. It is expected that this industry will provide more than 700 new jobs for the area by the turn of the century.

## ANACONDA - BUTTE LMA

The major economic activity in the Anaconda - Butte LMA during the first quarter was the announcement of nearly a thousand layoffs in Butte since the first of the year. A mining company announced the suspension of all mining operations in Butte. This means 700 salaried and hourly workers will be out of work by June 30, 1983. The 700 workers account for an annual payroll of \$32 million. The general manager of the company said the suspension is not a shutdown. Some employees may be hired back if economic conditions improve. There will be only 50 to 75 workers left working for the company after June 30, 1983. In addition to these layoffs, a manufacturing firm noted a high inventory and a depressed market for the company's products caused them to announce layoffs of 100 persons on April 1, 1983. The annual payroll loss would be about \$2 million. The company produces phosphorus which is used in agricultural chemicals and food additives. A chain grocery store was the third company to report layoffs during the first quarter. The company's administrative office and warehouse in Butte will close

at the end of May. This move will affect 135 persons. About \$4.5 million of the annual payroll will be lost.

A mining company east of Whitehall is planning production earlier than its original target date of mid 1983. In Dillon several workers have been called back to a talc mine.

An Anaconda plastics manufacturing firm was the low bidder on a contract for production of fiber helmets for the Army. They will produce 133,750 helmets at \$75 each. The total contract would exceed \$10 million.

As in most other areas, lumber activity in this area is beginning to pick up. A mill in Dillon added its night shift in the middle of February. This is the first time in a year and a half that the night shift has been working. A Deer Lodge mill reportedly started up in February and recalled about 90 employees.

A couple labor disputes were noted during this reporting period. A labor dispute between Anaconda police and Anaconda - Deer Lodge County was reported in January. This dispute idled about 65 city-county employees. Another labor dispute closed the schools when the Butte school administrators couldn't come to an agreement on a contract.

Butte has a new telephone company. The company guarantees phone rates up to 30% lower than its competitor. The firm specializes in business phone service. Other new businesses in the Butte area include a motor cycle sales and service center, an occupational safety and health service, and a video-taping service. Whitehall has a new consignment business, a new cheese shop, and a cafe which reopened. Phillipsburg reported a new business which consists of a general store, bar, and gas pumps. This opened on Highway 10-A near Phillipsburg.

Some business closures in Butte are a music store, a waterbed store and a toy store. The toy store may be replaced by a book store.

## **BOZEMAN LMA**

The spring-like weather has allowed construction work to progress on schedule. Recent completions include a restaurant and a bank. At MSU the student union is being expanded and a film and T.V. building will be constructed. A new office building for a financial company is being constructed. A major project in the near future is the development of a new hospital facility.

Housing, apartments, and condominium building permits for the first three months of 1983 have surpassed all of 1982's permits. Two condominiums and one apartment planned developments have a combined value of \$1,586,000.

Restaurant expansion can be noted. A newly constructed family restaurant and fast food restaurant will employ about 80 workers. Two other restaurants changed hands and will open up soon after remodeling.

Some laid off workers are finding their jobs reopened as the economy improves. Two area lumber mills started production again. A cement plant is rehiring their 60 workers after a December shutdown. A department store closed down permanently in January, leaving 10 persons unemployed. This closure is probably more of a reflection of nationwide reorganization rather than local economy decision.

## GLASGOW LMA

Oil well drilling and exploration work continues to be sporadic in the Glasgow area. Laid off workers have been returning to work for 2-3 week periods as drilling locations open up. Seismograph crews are idle in the area due to the wet ground. One oil company has reported drilling a new hole north of Glasgow which created work for several unemployed persons. It is expected that oil field work will be very slow during 1983 in northeastern Montana.

In the construction industry, a theatre in Glasgow which was severely damaged by fire last year will be rebuilt. It is expected to be operational in about three months. Construction has resumed on the Nashua to Fort Peck highway which has been at a standstill since last fall. Work is scheduled to begin soon on a new filtration plant at Fort Peck. The contractor of this job is expected to provide some employment opportunities for several people. A tribal housing project is nearing completion and workers are being laid off. A new business reported in the Glasgow area is an auto parts store.

## GLENDIVE LMA

Limited oil activity in the Glendive/Sidney labor market area continues to drive unemployment up. This has caused a ripple effect within the local business community. Many have reduced working hours and staff from their payrolls. The residual effect of the low activity has been felt by all sectors--retail trade, construction, manufacturing, service, etc.

Several oil related industries in the Sidney labor market area have either declared bankruptcy or have gone out of business due to the reduction in the price of the foreign oil market and the oversupply of petroleum in this country.

In the Glendive area five businesses closed their doors: an oil pump company, two retail stores, a motel and one restaurant. Construction was virtually at a standstill in spite of the mild weather for this time of year. Presently there are over 100 homes listed in the real estate market, plus several rental units. The only bright spot was the opening of a new fast food restaurant that has hired approximately 50 individuals.

In Sidney, the construction of the new addition for their local hospital was completed after a year and a half. Officials reported that they completed their sugar campaign in February, and they will be maintaining their normal operation for the remainder of the year with a reduced crew. Construction continues on a new fast food restaurant, and a new transport terminal east of Sidney.

The nationwide truckers strike apparently had no effect on the Glendive/Sidney labor market area. The only business that might have been hindered was the local sugar company in Sidney, but the railroad picked up the slack.

## **HARDIN - RED LODGE LMA**

Unemployment normally reaches its seasonal peak in the first quarter of the year. January and February unemployment rates climbed up above one year ago figures but March dropped down to nearly the same level as last March for a positive sign. The higher unemployment rates reflect the downturn in petroleum exploration and coal mining in the area.

Sugar beet growers are thinking about an alternative crop. They are still attempting to negotiate a contract with the sugar company for the 1983 crop and planting time is near. If a contract cannot be agreed upon the sugar refinery in the area will close down and the growers will not have a market for their beets.

An agreement between the Crow Indians and a major oil company to mine coal on the Reservation is nearing approval by the Department of Interior. Even though the coal market is currently very soft the company is discussing purchase agreements with several buyers and is optimistic that the coal can be marketed. When the mine is approved by the Government a bonus will be paid to the Crow tribe. Also, the tribe will benefit from mining royalties and unemployment opportunities.

## HAVRE LMA

A communications company will be closing its Havre customer service office, and also laying off or transferring 22 operators. The customer service office employed only 1 full time person. The cut backs are attributed to a consolidation and mechanization program. A railroad company in Havre has laid off 24 men in its mechanical department. The layoffs are said to be part of further realignments and moves to reduce costs. A Havre drilling exploration company also reported laying off several of their employees.

Work continues on ten townhouse apartments which should be completed near the end of March. There are plans in Chinook for a 40-unit motor hotel costing \$1.4 million. It would include a restaurant.

Agricultural activity in the Havre area is reported as slow. The only activity is the calving and lambing.

In Hingham a new business has opened and is now dealing in auto parts. An oil and gas bulk plant and an automobile repair shop have also opened. In Joplin an air filter reconditioning shop has opened. New businesses in the Havre area include, a new law office, a floor care service, a fast food restaurant, a silk flower shop, a furniture store and an art shop.

Businesses which closed consisted of a gift shop which was a branch of another shop, a ceramic shop, a sandwich shop and a photographers shop.

## HELENA LMA

During the first calender quarter of 1983, the number of unemployed individuals continued to climb. Construction on the BPA power line project near Boulder was completed, and a local Helena cement manufacturer laid off their employees as the result of the slack economy. The combined total of laid off workers was 80.

The new lime plant in Townsend shut down their operation along with a mine at Garrison due to over supply and low demand for their product. The mining company indicates however, that they should be back in operation in a couple of weeks.

Good weather helped outside work to continue throughout the report period for construction on the new Workers Compensation building remained active as well as the construction on a new business machine company building. Several remodeling jobs in the downtown area has

helped to keep construction crews employed most of the winter months. The expansion of a wholesale food distributor's warehouse is nearing completion.

Additional hiring was noted as the Legislators began their Biennial session in January. Several sawmill workers in the Townsend area returned to work after a 6 month layoff. The Helena Job Service office reported that there was a slight increase in additional and initial claims activity due to the nationwide truckers strike. Several employers pulled their "rigs" off the road in response to the reports of violence in order to protect their drivers. Also, the Job Service office reported that local retail trade has started to pick up as noted by the demand for sales clerks and cashiers. The unemployment compensation claims activity by the end of the first quarter started to decline slowly as outdoor working conditions improved.

## KALISPELL LMA

The Kalispell labor market area began to show signs of recovery during the first quarter of 1983. The January 1983 unemployment rate of 14.3% was down .1% from January 1982. During February and March 1983 the rate showed an even more significant drop from the same period in 1982. In February 1982 the rate was 18.4% while February 1983 was 14.5%, a drop of 3.9%. March's drop was 4.1%, from 19.2 in 1982 to 13.1 in 1983. This overall drop occurred in spite of over 300 layoffs in the Columbia Falls area. The effect of the Columbia Falls layoffs was partially offset by improved employment in the lumber industry.

The increase in potential demand for wood products and a mild winter were the largest contributors to the increase in wood products employment. Even though there wasn't a dramatic upturn in lumber orders the price for lumber inched up 10-15%, largely due to decreased inventories at retail lumber dealers nationwide. As the housing industry picks up steam lumber retailers will start to rebuild their depressed inventories, thus increasing the orders to area mills. Many area mills started recalling workers--some even returned to full production. Most mills were able to stockpile enough logs to get through spring breakup. However, a shortage of logs did cause several mills to cut back operations temporarily.

Construction activity increased somewhat in all areas of the Kalispell LMA. Some of this activity is seasonal and is helped by the mild weather conditions. Some new construction resulted from government contracts and decreased interest rates. Most contractors appear to have their regular crews busy again, but few new jobs are being offered. There is a definite optimism about construction demand for 1983 but also a wait and see attitude toward hiring new employees or expanding the business.

This same cautiousness effects the wholesale, retail, and service industries. Wholesale/retail demand was soft at the beginning of the quarter but picked up somewhat by the end of March. This trend is typical. As employment increases in basic industries such as lumber and wood products, demand tends to increase in the wholesale/retail and associated industries. Many wholesale/retail establishments in the Kalispell LMA expect a good year in 1983, but are holding off on new hires and expansion until they see if the upturns in wood products employment continues.

Cautious optimism was the general attitude during the first quarter of 1983 in the Kalispell labor market area. More optimism than seen in all of 1982--but still very cautious until the recovery proves to be long term.

## LEWISTOWN LMA

The Lewistown labor market area (LMA) started the first quarter of 1983 with a January unemployment rate of 11.4%, 2.5% above January 1982's rate of 8.9%. As the quarter progressed, the unemployment picture brightened considerably. February 1983's rate was 10.2% and March's rate was 8.1%, a January to March drop of 3.3%. March 1983's rate was only .1% above March 1982. If this trend continues the Lewistown LMA should be well on the way to recovery.

Retail sales were slow after the holiday season but started to pick up by quarter end. Many retailers felt sales were above the same period last year, but not yet high enough to warrant hiring new employees. The business community has learned to operate more efficiently. Only time will tell how much this improved efficiency will effect the labor market. Some of the new businesses that have opened in the Lewistown LMA are -- a sandwich shop, a new variety store, a new crop spraying service, and a stained glass supply.

Construction activity on a Lewistown motel remodeling progressed on schedule, with an expected completion date of eary May. Other construction activity picked up slowly--mostly remodeling jobs and road work.

Agricultural activity picked up as the weather improved. Calving, lambing and preparation for planting were the major activities. Area wheat producers faced a new challenge when a condemned railroad tresle closed down the Lewistown-Denton-Geraldine branch line, possibly permanently. Another factor effecting the agricultural activity was the Payment in Kind (PIK) program. It is estimated that forty-five to fifty percent of the wheat acreage may be taken out of production by participation in PIK.

Building products manufacturers were shut down at times during the quarter; some for maintenance, some for improved market contributions. The lumber products market is improving statewide and the Lewistown area mills should feel the effect of this soon.

Most sectors of the economy showed some improvement during the first quarter of 1983. Even though much of this improvement was normal seasonal change there seems to be an undercurrent of optimism that the economy has started to recover.

## MILES CITY LMA

The economy of the area continues to show the effects of declines in petroleum exploration and coal mining. The local job service offices are reporting claim loads nearly double last year's. Unemployment typically reaches its seasonal high in this quarter, but the 8.1 percent unemployment rate in February is nearly two percent greater than one year ago.

The level of construction activity in the area was lower than last year's level. Mild weather allowed existing projects to continue ahead of schedule. Most new building permits issued during the period were for additions or remodeling of private residences. Some portions of the Colstrip generating plants are being completed resulting in layoffs of workers in certain crafts.

Trade and service industries are feeling the economic slow down. Restaurants and motels, which were overflowing during the oil boom, are reducing work hours, laying employees off, and even closing their doors due to lack of business. Five retail stores and two medical facilities were destroyed by fire in January. The medical services were able to reopen but the stores lost all of their inventory and have not made plans to start again yet. A western wear store similar to one of the businesses destroyed by the fire held its grand opening in February.

## MISSOULA LMA

Sawmills in the Missoula LMA have been opening and rehiring. Continued warm weather and some rain have caused muddy conditions so most logging operations have been affected. A mill in Superior opened and hired 75 men who have been jobless for six months. Shortly after the reopening they expected to double their payrolls as the planer and shop crews will also return. In Thompson Falls a mill reopened in February. The general manager reported that the mill will be operated on a two shift basis while the planer will be restricted to one shift. The mill had previously been closed since August 1. A Missoula mill reportedly

has recalled workers to resume a night shift as orders are starting to pick up. The sawmill in Trout Creek increased its employment levels as about 30 workers returned to work. The planer section of the sawmill opened about a week later and 25 to 30 persons were called back to work. A mill in Darby has also been increasing its payrolls as there is a stronger demand for lumber.

A railroad tie manufacturing plant in Paradise will be rebuilt. When the plant resumes operations in about a year it will again employ about 32 persons but will produce twice as many ties.

Some of the new businesses in the Missoula LMA include a business in Missoula dealing with the Targeted Jobs Tax Credit. The business will survey employee's applications to see who may qualify for the tax credit. Their initial staff consists of 12 persons. They anticipate hiring an additional 60 employees. These employees would be scattered throughout the United States. Other new businesses include a pizza parlor in Hamilton and one in Missoula. A new ice cream shop in Missoula employed nine persons. A new bowling alley complex is planned for Hamilton. While two restaurants closed in Missoula another has opened. The two restaurants that closed left about 30 persons out of work. A bar and 24-hour cafe in Hamilton also closed. Other closures in the LMA affected a wide variety of businesses. In Hamilton layoffs were reported in log home building, construction and retail trade during January. A department store in Hamilton closed in January. In March there were reports of a 50-person layoff in Missoula by a communications company. The layoff represents the closure of the company's Missoula office.

A gold mining operation started on Hughes Creek in the West Fork area of Ravalli County. Initial employment is six with plans of an additional 20 if production goes as expected.

Major construction projects in the Missoula area continued as the weather has been nice. The projects include a hospital and a university building.

Agricultural activities include calving and lambing with some equipment preparation for spring field work. Mild weather was a big factor in the successful calving and lambing season.

## **SHELBY - CUT BANK LMA**

The major economic activity in the Shelby - Cut Bank area is a report of layoffs from the refinery at Cut Bank. The company reported they will lay off between 12 and 24 persons. The manager of the plant said there is no question the natural gas processing unit at the

refinery will remain in operation. The company now employs about 55 people. One reason for the layoffs is the low oil prices and the price of finished products. Oilfield activity in other areas of the LMA includes the decision by the Blackfeet Tribe to open thousands of acres on the reservation for leasing. This is expected to bring new rigs and oil activity into the area by spring. A couple of oil companies are conducting First-aid classes while the workers are off. The majority of oilfield workers are out of work and drawing unemployment.

The main agricultural activity in the area is sheep shearing. Farmers are concerned about sufficient moisture for spring seeding. Mild weather continued to allow ongoing construction of several homes and an apartment complex in the Cut Bank area. Building permits in the Shelby area consist of only some small remodeling projects.

Openings are reported in the service industry for restaurant help and some office help in Shelby. Retail trade businesses report above average business during the first quarter of 83.

The basketball tournament in Shelby brought business to the hotels, motels, restaurants, and other businesses in the area.

The Consumer Price Index (CPI) measures changes in prices of goods and services in major expenditure groups. The CPI for Urban Wage Earners and Clerical Workers (CPI-W) covers about 40 percent of the total noninstitutional population. The CPI for All Urban Consumers (CPI-U) covers about 80 percent of the total noninstitutional population, including wage earners and clerical workers, salaried workers, the self-employed, retirees, and the unemployed.

### Real Spendable Earnings

Montana's real spendable average weekly earnings dropped during the first quarter of 1983. January, 1983 real spendable earnings of \$77.20 compares to \$76.47 in January, 1982. Both February and March of 1983 were lower than their respective months of 1982. A factor in earnings being lower than last year is the decline in average weekly hours of production workers. If the components of the Consumer Price Index continues at the pace of the first quarter, 1983 will have an inflation rate of 1.4 percent.

-----  
1/ Average Weekly earnings of total private nonagricultural production workers. 2/ Real spendable average weekly earnings of private nonagricultural production workers. 3/ Taxes computed on family with four exemptions.

UNEMPLOYMENT INSURANCE

## EMPLOYER CLASSIFICATION AND EXPERIENCE RATING

Effective January 1, 1980, Montana instituted the "reserve ratio" experience rating system. Under this system each subject employer (excluding some nonprofit organizations and all government entities) is assigned an "experience factor" which is contributions paid minus benefits charged on each employer's account for the most recent three fiscal years immediately preceding the computation date, divided by the employer's average annual taxable payroll for the same three fiscal years. Each employer with a positive "experience factor" is designated as an eligible employer and those with a negative "experience factor" are designated as deficit employers. Schedules are then prepared listing all eligible and deficit employers in inverse numerical order of their experience factors as well as the cumulative taxable payrolls for all of those employers. The cumulative taxable payroll amounts are then segregated into groups that will yield approximately the average tax rate according to the tax schedule assigned for that particular taxable year. Each group will be identified by the rate class listed on the schedule and each employer is assigned that contribution rate opposite their rate class for the tax schedule in effect for the taxable year.

The rate schedule for each calendar year is assigned based upon the ratio of the trust fund balance as of December 31 prior to the rate year to total wages in covered employment for the previous fiscal year.

Schedules of contribution rates are shown on the following page. The rate schedule assigned for taxable year 1983 is Schedule X. As can be noted, the ratio of fund to total wages must be less than .005 to assign Schedule X and the approximate average tax yield will be 3.1% for that schedule. Eligible employers will be assigned contribution rates of 1.9% to 3.7% and deficit employers 4.0% to 4.4% based on their respective rate class assignment. Unrated employers (those with less than three years of experience) are all assigned a rate of 3.9%.

# UNEMPLOYMENT INSURANCE: CLAIMS TO PAYMENT

Many of those persons who become separated from their jobs enter our local Job Service offices for two reasons: to seek employment and to claim unemployment insurance (UI) benefits. Claimant wage credits obtained from insured employers are examined to determine if the claim meets monetary eligibility requirements for UI benefits and, if so, for how much per week the claimant is qualified. Monetarily eligible claims are subsequently segregated according to criteria for establishing which party (claimant or employer) was most responsible for the job separation in question. Claims for job separations resulting from claimant actions (issues) are further subjected to the test of whether or not an individual's reduction in his potential benefit duration is warranted. If otherwise eligible and if availability criteria continue to be complied with throughout his actual unemployment duration, weekly benefit payments will commence with the claimant's second week of unemployment (a waiting week must be served under Montana law). The number and amount of such payments by county are shown in the table on the following page. Interstate payments in the table refer to payments made to individuals who now reside in another state but who had established wage credits in Montana based employment. Amounts shown in the table are financed through employer taxes paid to the Montana UI Trust Fund Account.
